Mumbai Monorail with a green promise

The Mumbai Monorail is well on its way to completion and the company awarded the creation of this sustainable urban transit system is Scomi along with its engineering partner Larsen & Toubro.

This company, based in Malaysia, is one of two across the globe capable of providing an integrated monorail system. The Mumbai system will provide an alternative commuting option to at least 300,000 travellers everyday.

The green aspect of the Mumbai Monorail comes in the form of the reduced carbon emissions which are estimated to be in the range of 200 tons of carbon dioxide reduced on a daily basis. The system also scores green points in terms of noise pollution levels as it will be quieter than other modes of transport. The structure itself is eco friendly as the design allows for sunlight to light up the cabs and excessive emissions are not trapped within.

The Mumbai Monorail will offer users comfort, reliability, sustainable mobility and will aid in the reduction of congestion.
